## GUI Prototype for Use Case 1

Getting diagnosis by selecting phenotype(s) from features screen

1 Press new query button

Welcome Screen

2 Select phenotypes from features screen (multiple phenotypes can be selected)

Features Screen

### 3 Press show selection on the features screen

Show Selection Screen

**4 Press get diagnosis – diagnosis results are displayed**

## Exception 1: No internet connection available

Exception #3  
Users tries to get  
diagnosis without an  
internet connection.  
Error message is displayed.

## Exception 2: Database is never updated

### Exception #2

User select New Query  
& database is not  
updated at all. Empty  
Features & Diseases  
screen

## GUI Prototype for Use Case 2

Getting diagnosis by searching for phenotype's name or HPO Id

### 1 Press new query button

Welcome Screen

2 Select search option from navigation bar, type in phenotype name or id, select phenotype (multiple phenotypes can be selected)

Features Screen

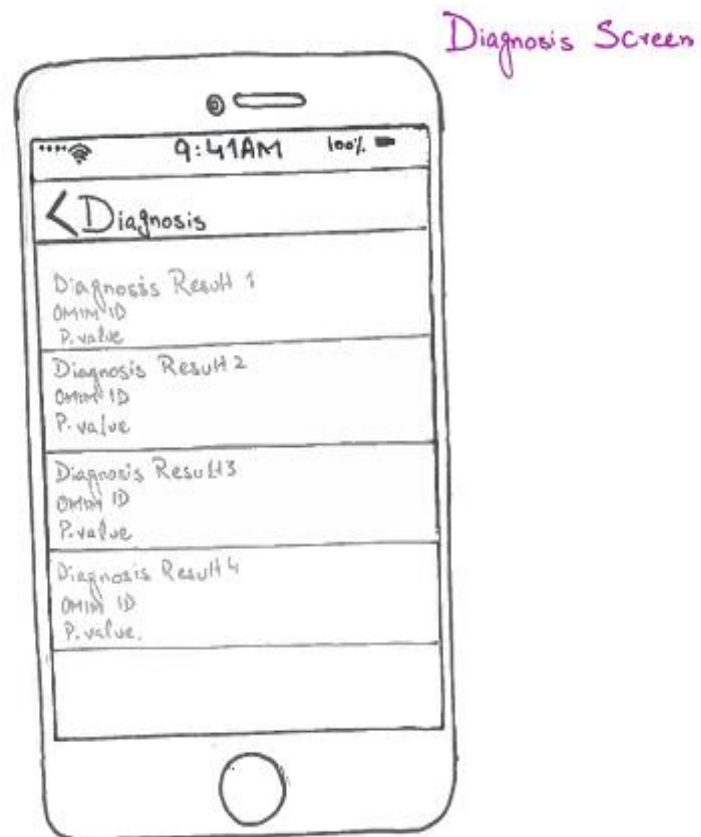

### 3 Press show selection on the features screen

Show Selection Screen

**4 Press get diagnosis – diagnosis results are displayed**

## Exception 1: No internet connection available

Exception #3  
Users tries to get  
diagnosis without an  
internet connection.  
Error message is displayed.

## Exception 2: Database is never updated

### Exception #2

User select New Query  
& database is not  
updated at all. Empty  
Features & Diseases  
screen

## GUI Prototype for Use Case 3

Getting diagnosis by selecting phenotype(s) from diseases screen

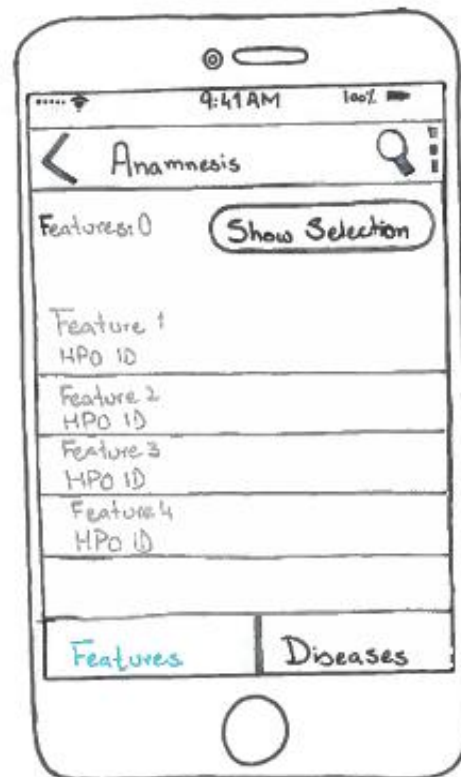

### 1 Press new query button

Welcome Screen

May Have

## 2 User is directed to features screen

Features Screen

3 Selected diseases tab from the features screen, select disease (one selection possible at a time)

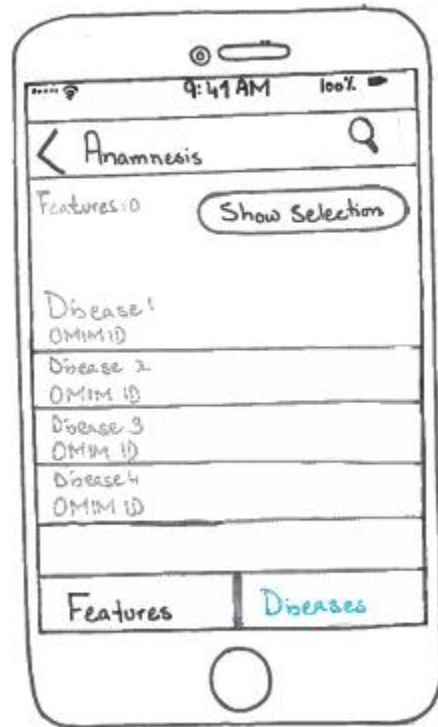

**4 User is directed to selected disease screen displaying annotation for selected disease. Here user can select phenotypes related to selected disease (multiple selection possible)**

**Selected Disease  
Screen**

5 User is again directed to diseases screen on pressing back button

Diseases Screen

## 6 Press show selection on the diseases screen

Show Selection Screen

**7 Press get diagnosis – diagnosis results are displayed**

## Exception 1: No internet connection available

Exception #3  
Users tries to get  
diagnosis without an  
internet connection.  
Error message is displayed.

## Exception 2: Complete update of database is not performed

### Exception #2

User select New Query  
& database is not  
updated at all. Empty  
Features & Diseases  
screen

## GUI Prototype for Use Case 4

Getting diagnosis by searching for disease's name or OMIM Id

### 1 Press new query button

Welcome Screen

May Have

## 2 User is directed to features screen

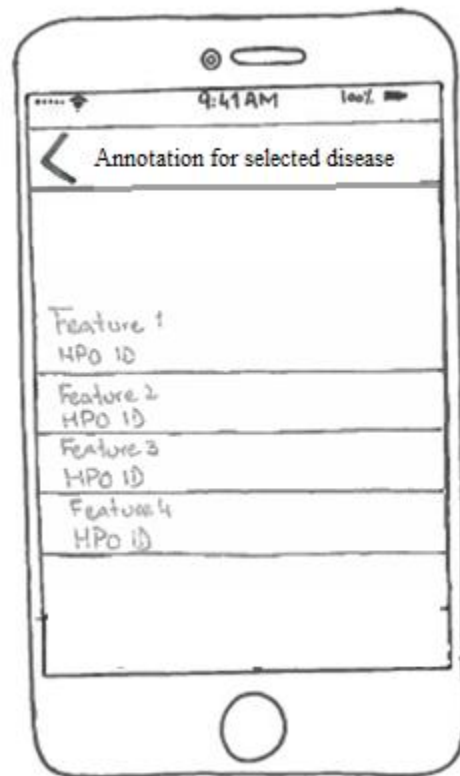

Features Screen

3 Selected diseases tab from the features screen, select search option from navigation bar, type in disease name or id, select disease (one selection possible at a time)

*Diseases Screen*

**4 User is directed to selected disease screen displaying annotation for selected disease. Here user can select phenotypes related to selected disease (multiple selection possible)**

**Selected Disease  
Screen**

5 User is again directed to diseases screen on pressing back button

Diseases Screen

## 6 Press show selection on the diseases screen

Show Selection Screen

**7 Press get diagnosis – diagnosis results are displayed**

## Exception 1: No internet connection available

Exception #3  
Users tries to get  
diagnosis without an  
internet connection.  
Error message is displayed.

## Exception 2: Full update of database is not performed

### Exception #2

User select New Query  
& database is not  
updated at all. Empty  
Features & Diseases  
screen

## GUI Prototype for Use Case 5

### Adding more phenotype(s) to the selected phenotype(s)

#### 1 Select add features from show selection screen

**Note:** Client made a comment to use **Back** button (instead of **Add Features** button) to go to previous screen from **Show Selection** screen to use the functionality. Hence the **Add Features** button is no more available.

2 User is directed to diseases screen or features screen depending on from which screen show selection option was selected. User adds more phenotypes.

**Exception: Neither full nor minimum update of database is performed**

Exception #2

User select New Query  
& database is not  
updated at all. Empty  
Features & Diseases  
screen

## GUI Prototype for Use Case 6

### Getting full update of the database

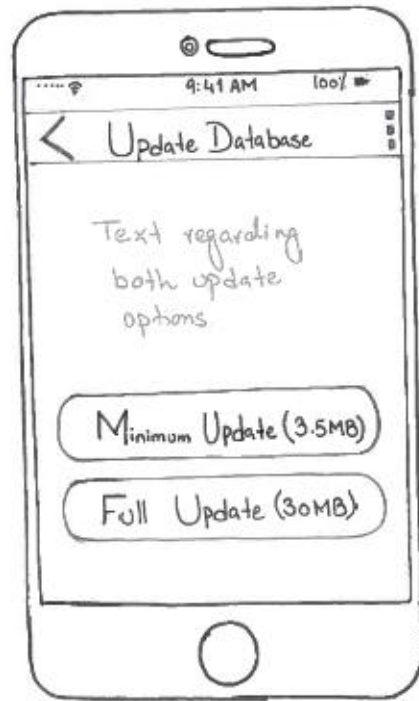

#### 1 Press update database button

Welcome Screen

May Have

## 2 Select full update

Update Database

## Exception: Internet connection not available

Exception #1

Internet not available  
while updating database

## GUI Prototype for Use Case 7

### Getting minimum update of the database

#### 1 Press update database button

Welcome Screen

May Have

## 2 Select minimum update

Update Database

## Exception: Internet connection not available

Exception #1

Internet not available  
while updating database

## GUI Prototype for Use Case 8

### Help

#### 1 Press help button

Welcome Screen

May Have

## 2 Help page is displayed

Help Screen

**Exception: Internet connection not available, empty help screen is displayed with error message**

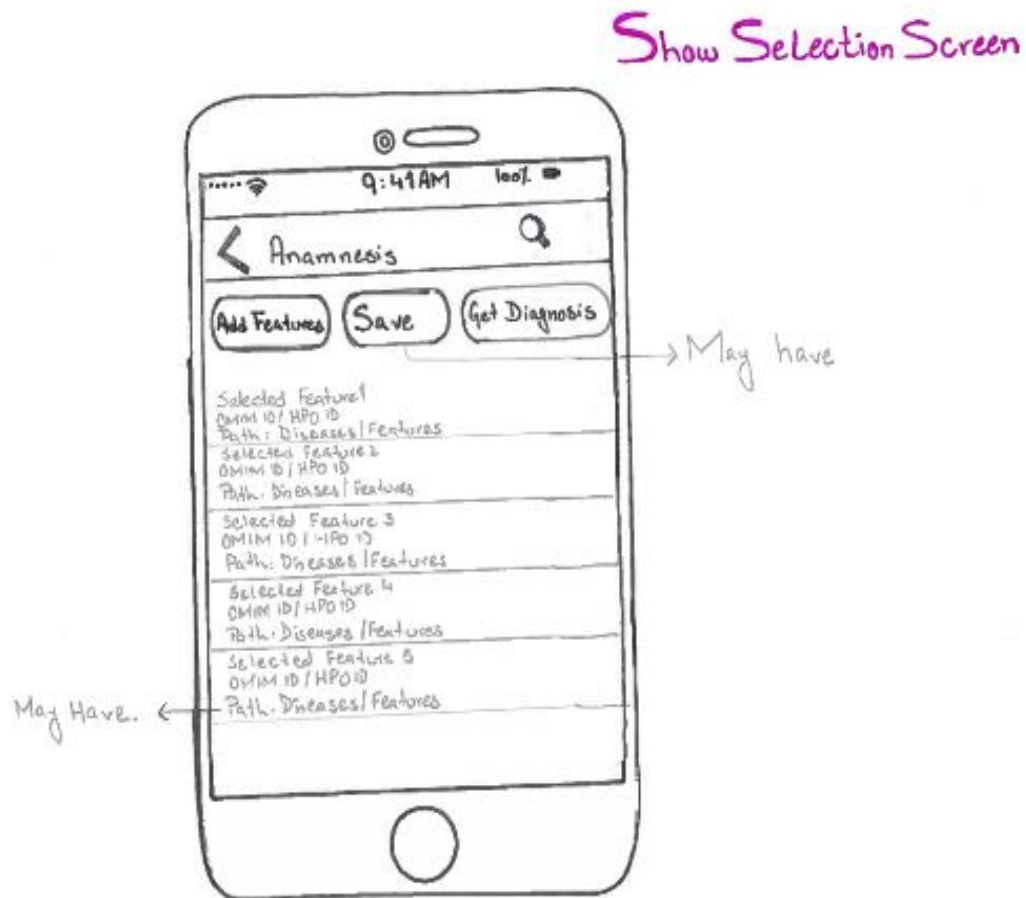

Help Screen

## GUI Prototype for Use Case 9

### Save query

- 1 Select save option on show selection screen, query is saved

## GUI Prototype for Use Case 10

### Load query

- 1 Select load query from welcome screen

Welcome Screen

May Have

2 User is directed to load query screen list of saved queries is displayed, select a query

### 3 User is directed to show selection screen after loading selected query

Show Selection Screen

## GUI Prototype for Use Case 11

### Edit query

- 1 Select load query from welcome screen

Welcome Screen

May Have

2 User is directed to load query screen list of saved queries is displayed, select a query

3 User is directed to show selection screen after loading selected query, performs changes to the query, selects save

Show Selection Screen
